Company Name	PAL Technologies Ltd	Address	141 St James Road
Company Website	www.paltechnologies.com	City/Town	Glasgow
Main Contact	Douglas Maxwell	County - Region	Lanarkshire
Contact Email Address	info@paltechnologies.com	Country	Scotland
Sector	IT Hardware	Postcode	G4 0LT
Annual Revenue		Phone	0141 552 6085
Rating		Fax	0141 552 6085
Status	Spinout		

Company Summary

The accurate measurement of free-living physical activity allows clinicians and other professionals to assess patient compliance with exercise and treatment protocols and patient response to novel treatment interventions. PAL Technologies Ltd was founded in January 2001 and the founders (Douglas Maxwell, Nikos Mourselas and Malcolm Granat) licensed in the technology platform which had been developed at the Bioengineering Unit, University of Strathclyde. Douglas Maxwell developed the concepts for the PAL family of products and, prior to founding PAL Technologies, he held a prestigious Royal Society of Edinburgh Enterprise Fellowship. Dr Nikos Mourselas is an innovator in the field of minimised medical logging and sensing technology. Prior to founding PAL Technologies he had undertaken technical development roles in a number of large and small private sector technology companies. Dr Malcolm Granat retains a senior academic position in the Bioengineering Unit, University of Strathclyde. The core technology behind the PAL family of products has been developed and refined over many years using both patient groups and unimpaired subjects. One of the key drivers for clinical colleagues was that, although they could easily measure in the laboratory the walking skills and exercise tolerance of their patients, this told them little about what activities they actually did when they were at home or work. Self-report diaries have been shown to be unreliable so simple and unobtrusive technologies were developed to accurately measure free-living activity. The activPAL is worn discretely on the thigh. It can be incorporated into clothing, worn on a neoprene cuff or secured to the thigh using a medical grade adhesive covering. This has the advantage of maximizing subject compliance as the device need not be removed with clothing.

Company Name	Radan Computational Ltd	Address	Research and Innovation Services
Company Website			University of Bath
Main Contact	Robert Gordon	City/Town	Bath
Contact Email Address		County - Region	Avon (Bristol, Bath and North Somerset)
Sector	IT Systems	Country	England
Annual Revenue		Postcode	BA2 7AY
Rating	5	Phone	01225 320 320
Status	Spinout	Fax	

Company Summary

Radan systems are critical to the design and production of all types of engineering products. Operating internationally through strategic partners and our own USA operation, the Company is establishing an enviable reputation for leading edge engineering IT solutions. Over many years Radan has provided IT solutions to engineering design, manufacture and sheet metal industries. Many customers have achieved cost savings through our design automation solutions, tailored to meet specific needs. One of the most successful Radan software products is the 3D solid modelling CAD product. Now New Radesign provides one of the easiest to use interfaces with 2D CAD so that any draughtsman can produce full and accurate 3D solid models. New Radraft offers a number of new technologies in an integrated package for 2D draughting and design automation. Areas in which Radan products excel include sheet metal product design and manufacture. Radan is one of the world's leading producers of CAD and CAM systems for the sheet metal working industry.
